

WEATHER DAMAGED DOOR REPLACEMENT

# When the weather wins, switch sides.

Engineered for what Melbourne throws at it.

## WHY THIS HAPPENS

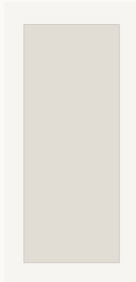

Melbourne UV breaks down most paint finishes within two to three years. Sun on one face, shade on the other. The door expands unevenly and warps. Rain hits the door, runs down, and sits at the base. The bottom rail rots first. Repaint, repaint, repaint. The surface holds for a few years. Then it doesn't.

## THE ANSWER: STORMBLOC™

## From \$2,200 supplied & installed

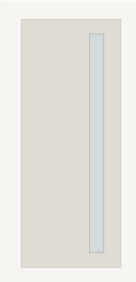

820 x 2040 x 35mm - Colorbond® steel both faces  
RotGuard™ moisture-resistant edges - Engineered weather-resistant core

## THREE CONFIGURATIONS

**CORE**  
Solid Colorbond panel.  
Maximum privacy + weather resistance.  
Best for: West-facing rears and fully exposed positions.

**From \$2,200**

**VISION**  
Vertical viewing strip.  
Light + line of sight without opening.  
Best for: Front doors with full sun exposure.

**From \$2,700**

**HALF LIGHT**  
Small upper window.  
Brings natural light into hallways and entries.  
Best for: Coastal and southerly-facing entries.

**From \$2,700**

22 COLORBOND® COLOURS · ALL THE SAME PRICE

## CLASSIC FINISH

- |                                                                                                                                    |                                                                                                                                    |                                                                                                                                     |

## Why StormBloc?

Colorbond steel doesn't fade, peel or chalk — same material on Australian roofing for decades.  
RotGuard™ moisture-resistant edges take the rain. Engineered weather-resistant core takes the heat.  
Built once, holds for decades. The repaint cycle ends here.  
Manufactured by Bespoke Doors, supplied and installed by Doors Replaced.
